ABSTRACTED-PUB-NO: JP09183879A

BASIC-ABSTRACT:

A fluororubber composition (X) comprises (A) 100 parts weight (pts. wt.) of a fluororubber; (B) 0.1-10 pts. wt. of a salt derived from an organic quaternary ammonium hydrogensulphonate and/or 1,8-diazabicyclo(5.5.7)-7-undecene; (C) 0.5-30 pts. wt. of a metal oxide and/or metal hydroxide; (D) 0.5-20 pts. wt. of an organic peroxide; (E) 0.5-20 pts. wt. of a polyfunctional compound; and (F) 0.1-20 pts. wt. of a phenolic compound having an electrophilic substituent.

USE - (X) is used for O-rings, gaskets, tubes, and hoses of automobiles.

ADVANTAGE - (X) has good vulcanisation behaviour stability at a kneading temperature and good mechanical properties.

ABSTRACT:

PROBLEM TO BE SOLVED: To provide a fluororubber composition containing a fluororubber, an organic quaternary ammonium bisulfate salt, etc., at specific ratios, exhibiting a vulcanization behavior stable to kneading temperature, having excellent heat- resistance, oil resistance, weather resistance and compression set resistance and useful for radiator, etc.

SOLUTION: This fluororubber composition is composed of (A) 100 pts.wt. of a fluororubber such as a tetrafluoroethylene-vinylidene fluoride-propylene terpolymer, (B) 0.1-10 pts.wt. of an organic quaternary ammonium bisulfate salt and/or a salt derived from 1,8-diazabicyclo[5.4.0]-7-undecene, (C) 0.5-30 pts.wt. of a metal oxide and/or metal hydroxide such as magnesium oxide, (D) 0.5-20 pts.wt. of an organic peroxide such as benzoyl peroxide, (E) 0.5-20 pts.wt. of a polyfunctional compound such as triallyl isocyanurate and (F) 0.1-20 pts.wt. of a phenolic compound having an electron-attracting substituent such as nitrile group.
